

The medical examiner's job is to speak for the dead, and protect the living

But what happens when the dead speak for themselves?

Thirty years after witnessing the horrible deaths of his parents, Armed Forces Medical Examiner Stephen Englehart's past traumas resurface when a dead soldier awakens on the autopsy table, mysteriously heals, and kills Stephen's partner. As Stephen searches for answers, he discovers shadows of an unsanctioned military experiment that traces back three decades—an experiment involving his father. Dodging roadblocks from superior officers who may be involved and a spy who threatens to expose Stephen's long-buried secrets, Stephen has to move quickly: his sister, a Green Beret, is missing, and she may be the next casualty.
